

SHAREVAULT CONNECTOR FOR DROPBOX

Sync Your DropBox Content into ShareVault

The ShareVault Connector for Dropbox syncs files from Dropbox to ShareVault, so you get the benefits of Dropbox's peer collaboration tools with ShareVault's security and document monitoring features for external file sharing. ShareVault is the **ONLY** virtual data room provider offering a connector for Dropbox.

SEAMLESS INTEGRATION

Blend the convenience of DropBox's simplicity with ShareVault's enterprise-grade document security and document organization tools. Choose the Dropbox folders that should be synced to ShareVault for external sharing, and the powerful one-way sync engine will start its work, assuring that the contents are always kept current with the Dropbox source folders. The hierarchical structure within ShareVault mirrors the structure of the synced Dropbox folders.

SINGLE PANE OF GLASS FOR ALL YOUR SENSITIVE CONTENT

ShareVault Connectors provide **tight integration with Box, Dropbox, SharePoint, Office365 and/or DocuSign**. You can add several connectors to assemble content from various organizations on a single "pane of glass," so that your outside users can access a single web application to view documents from multiple platforms.

Contact your ShareVault account executive to review your requirements and to see how ShareVault can improve your external document sharing process.

WHY NOT JUST USE DROPBOX FOR EXTERNAL SHARING OF CONFIDENTIAL DOCUMENTS?

Dropbox is an elegant and straightforward file sharing platform offering essential collaborative features such as comments, version history, “badges” for collaboration alerts and integration with Microsoft Office. The simple and effective Dropbox platform enables customers to easily develop basic processes for users contributing to the authoring process.

However, when it comes to external sharing of confidential documents in business applications such as due diligence, a full-featured virtual data room is the right tool for the job.

CHOOSE THE RIGHT SOLUTION FOR SHARING SENSITIVE DOCUMENTS

For sharing confidential documents with outside users, it’s considered a best practice to use a virtual data room with the following features to lock down the documents and facilitate the review process:

Granular Permissions, Document Security Policies and DOCUMENT CONTROL FEATURES INCLUDING:

Customizable watermarking based on policies

Secure printing to block printing to PDF

Information Rights Management (IRM) for remote shredding

Screenshot blocking

User Activity Reporting:

Detailed user activity monitoring, including specific pages viewed, time spent reading and IP address tracking

Built-in analytics provide a real time audit trail and insights into user behavior

Organization Features:

Ability to freeze the index

Includes batch print in order of the data room index (if users have printing rights)

Ordering the hierarchy

Auto-numbering to provide a numerical hierarchical index

A Configurable Confidentiality Notice Displayed Upon Login
